

BIO WASTE ENERGY

June 2020

ABOUT DK RENEWABLE ENERGY

Originating from Denmark – one of the world's leading countries in clean energy, *DK Engineering Ltd.* has been involved in renewable energy development for over 10 years. In South East Asia we offer development, design and full EPC capabilities for wind, solar and bio-waste energy projects alongside trusted partners

WHAT WE DO

At DK Renewable Energy we:

- Consultancy from project planning through to operation
- Pre-feasibility and feasibility studies
- LCOE calculations, technical design, bidding documents and evaluation
- Project construction, management and consultancy
- EPC BOP construction and management with selected partners

WHY CHOOSE DKE

- We take an honest and responsive approach to our work
- We work collaboratively with clients
- We provide on-going project support service

BIO ORGANIC WASTE

There is high interest in organic materials management, driven by emerging state regulations for the diversion of organics from disposal facilities. DK helps communities evaluate their waste streams and the applicability of established and emerging technologies to services related to bio-waste treatment plants. This includes:

- Investment consultancy
- Project development
- Feasibility study
- EIA reports
- Project implementation

Pollution is one of the major environmental concerns in Vietnam. Household waste treatment plants, therefore, will be very imperative.

In co opearation with EFACEC, the Europe market leader in waste management systems, we provide services related to bio waste treatment plant:
